

Summary Sheet Observation:

Table Creation:

- Dataset converted into an Excel Table named **Sales_Data** to enable dynamic formulas and automatic range expansion by using **Format as table option**.
- **Shortcut for format as table Ctrl +T**
- Aligned the table using **Alignment options** and customized the colour fill by **font options**

Data Analysis:

1. **Data Cleaning:** Segregate the Product ID by that we can group and filter the data
 - Extract Day from Product ID =**LEFT([@[Product ID]],2)**
 - Extract Month from Product ID=**MID([@[Product ID]],4,3)**
 - Extract Country Code from Product ID= **RIGHT([@[Product ID]],2)**
2. **Data Summarization:** Determine the major metrics in the data set
 - Total price=**SUM(Sales_Data[Price (\$)])**
 - No .of products in the list=**COUNTA(Sales_Data[Product Name])**
 - Average price of all products =**AVERAGE(Sales_Data[Price (\$)])**
 - Minimum Price=**MIN(Sales_Data[Price (\$)])**
 - Maximum Price=**MAX(Sales_Data[Price (\$)])**
 - Product count based on category=**COUNTIF(Sales_Data[Category],"Category name")**
3. **Data Classification:** Based on product categories
 - Categorize the product based on the price=**IF([@[Price (\$)]]>=500,"High price","Standard price")**
 - No.of products at less than \$100=**COUNTIF(Sales_Data[Price (\$)],"<100")**
 - Calculate the price based on the product category
 - Electronics=**SUMIF(Sales_Data[Category],"Electronics",Sales_Data[Price (\$)])**
 - Kitchen=**SUMIF(Sales_Data[Category],"Kitchen",Sales_Data[Price (\$)])**
 - Fashion=**SUMIF(Sales_Data[Category],"Fashion",Sales_Data[Price (\$)])**
 - Accessories =**SUMIF(Sales_Data[Category],"Accessories",Sales_Data[Price (\$)])**
 - Outdoor=**SUMIF(Sales_Data[Category],"Outdoor",Sales_Data[Price (\$)])**
4. **Data Formatting:** To highlight the data based on the price category
 - Conditional formatting on price category to highlight the High price and Standard Price by using the option **Highlight the data cells -> text that contains**
